**EXAR'S ST16C650A AND XR16C850 COMPARED WITH TI'S TL16C750**

Author: PY

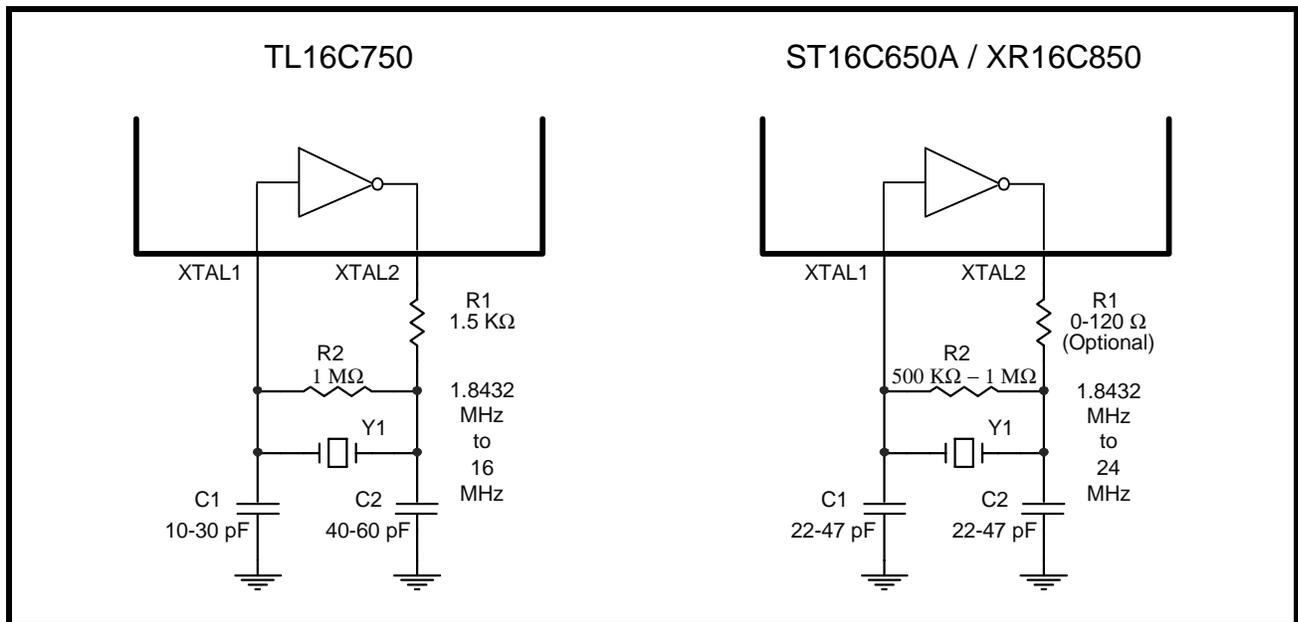

**1.0 INTRODUCTION**

This application note describes the major difference between Exar's ST16C650A and XR16C850 with TI's TL16C750. These devices are very similar, with a few hardware, firmware-related and bus timing differences.

**1.1 HARDWARE DIFFERENCES**

- The TI TL16C750 and Exar ST16C650A and XR16C850 are all available in the 44-pin PLCC package. The ST16C650A and XR16C850 are also available in the 40-pin PDIP and 48-pin TQFP packages. Additionally, the XR16C850 is available in the 52-pin QFP package. The TL16C750 is also available in the 64-pin SQFP package. In the 44-pin PLCC package, the Exar and TI UARTs are pin-to-pin compatible if pin 34 of the ST16C650A and XR16C850 is tied to VCC (pin 34 of the TL16C750 is not used).
- The oscillator circuitry is similar, but there are some differences when using a crystal oscillator and when using an external clock. See Figure 1 below for the differences in the oscillator circuitry for a crystal oscillator. When using an external clock input for frequencies greater than 24 MHz, the ST16C650A and XR16C850 will require a 2K pull-up resistor on the XTAL2 pin.

**FIGURE 1. CRYSTAL OSCILLATOR CIRCUITRY DIFFERENCES**

**1.2 BUS TIMING DIFFERENCES**

- The TL16C750 requires that the -CS pin is asserted first before the -IOR or -IOW pin and the -IOR or -IOW pin must be de-asserted before the -CS pin is de-asserted. During a read, the Exar UART can have either the -CS or the -IOR signal asserted first and have either signal be de-asserted first. The signals are wire-ORed in the Exar UART, therefore the second signal asserted will initiate the read cycle and the first signal de-asserted terminates the read cycle. The same is true during a write for -CS and -IOW. The flexibility of the Exar UARTs timing can be important in DSP, ARM, and MIPS designs.

### 1.3 FIRMWARE DIFFERENCES

#### 1.3.1 Firmware Differences Between the ST16C650A and TL16C750

The internal registers in the ST16C650A offers more features than the TL16C750 with some differences:

**TABLE 1: ST16C650A AND TL16C750 REGISTER SET DIFFERENCES**

A2:A0	R/W	ST16C650A	TL16C750
<b>LCR Bit-7 = 0</b>			
001	R/W	<b>Interrupt Enable Register (IER)</b> <ul style="list-style-type: none"> <li>• Bit-7 = Auto CTS# Interrupt Enable</li> <li>• Bit-6 = Auto RTS# Interrupt Enable</li> <li>• Bit-5 = Xoff Interrupt Enable</li> </ul>	<b>Interrupt Enable Register (IER)</b> <ul style="list-style-type: none"> <li>• Bit-7 = Not Used</li> <li>• Bit-6 = Not Used</li> <li>• Bit-5 = Low Power Mode</li> </ul>

### 1.3.1.1 Summary of Differences Between the ST16C650A and TL16C750

The differences between the ST16C650A and TL16C750 is summarized in the table below.

**TABLE 2: DIFFERENCES BETWEEN EXAR'S ST16C650A WITH TI'S TL16C750**

COMPARISON	ST16C650A	TL16C750
Data Bus Standard	Intel and PC Mode	Intel
Power Supply Operation	3.3 and 5 V	3.3 and 5 V
Max Operating Current	<b>1.3 mA @ 3.3 V</b> <b>3 mA @ 5 V</b>	3.2 mA @ 3.3 V 4 mA @ 5 V
Max Frequency on XTAL1	<b>33 MHz @ 3.3 V</b> <b>50 MHz @ 5 V</b>	14 MHz @ 3.3 V 16 MHz @ 5 V
Data Sampling Rates	16X	16X
BRG Prescaler	1 or 4	1 or 4
Max Data Rate	<b>2 Mbps @ 3.3 V</b> <b>3.125 Mbps @ 5 V</b>	875 Kbps @ 3.3 V 1 Mbps @ 5V
Package	44-PLCC, 48-TQFP, 40-PDIP	44-PLCC, 64-SQFP
Operating Temperature Ranges	Commercial and Industrial	Commercial and Industrial
TX/RX FIFO Size	32	<b>64 or 16</b>
TX/RX Trigger Tables	1 Trigger Table	<b>2 Trigger Tables (depending on FIFO Size)</b>
TX/RX FIFO Interrupt Trigger Levels	4 Selectable	4 Selectable
Hardware Flow Control	Auto RTS/CTS Flow Control	Auto RTS/CTS Flow Control
Software Flow Control	<b>Auto Xon/Xoff Flow Control</b>	N/A
Infrared Mode	<b>IrDA encoder/decoder (ver 1.0)</b>	N/A
Sleep Mode	<b>Sleep Mode with Wake-up Indicator via an Interrupt</b>	Sleep Mode with Auto Wake-up
Low Power Mode	N/A	<b>Low Power Mode</b>
Diagnostic Modes	Local loopback	Local Loopback
RS485 Mode	<b>Auto RS485 Mode</b>	N/A

**1.3.2 Firmware Differences Between the XR16C850 and TL16C750**

The internal registers in the XR16C850 offers more features than the TL16C750 with some differences:

**TABLE 3: XR16C850 AND TL16C750 REGISTER SET DIFFERENCES**

A2:A0	R/W	XR16C850	TL16C750
<b>LCR Bit-7 = 0</b>			
001	R/W	<b>Interrupt Enable Register (IER)</b> <ul style="list-style-type: none"> <li>• Bit-7 = Auto CTS# Interrupt Enable</li> <li>• Bit-6 = Auto RTS# Interrupt Enable</li> <li>• Bit-5 = Xoff Interrupt Enable</li> </ul>	<b>Interrupt Enable Register (IER)</b> <ul style="list-style-type: none"> <li>• Bit-7 = Not Used</li> <li>• Bit-6 = Not Used</li> <li>• Bit-5 = Low Power Mode</li> </ul>
010	W	<b>FIFO Control Register (FCR)</b> <ul style="list-style-type: none"> <li>• Bit-5 = TX FIFO Trigger Level Select Bit-1</li> <li>• Bit-4 = TX FIFO Trigger Level Select Bit-0</li> </ul>	<b>FIFO Control Register (FCR)</b> <ul style="list-style-type: none"> <li>• Bit-5 = 64 Byte FIFO Enable</li> <li>• Bit-4 = Not Used</li> </ul>
010	R	<b>Interrupt Status Register (ISR)</b> <ul style="list-style-type: none"> <li>• Bit-5 = Auto RTS/CTS Interrupt</li> <li>• Bit-4 = Xoff or Special Character Interrupt</li> </ul>	<b>Interrupt Status Register (ISR)</b> <ul style="list-style-type: none"> <li>• Bit-5 = 64 Byte FIFO Enabled</li> <li>• Bit-4 = Not Used</li> </ul>

### 1.3.2.1 Summary of Differences Between the XR16C850 and TL16C750

The differences between the XR16C850 and TL16C750 is summarized in the table below.

**TABLE 4: DIFFERENCES BETWEEN EXAR'S XR16C850 WITH TI'S TL16C750**

COMPARISON	XR16C850	TL16C750
Data Bus Standard	<b>Intel and PC Mode</b>	Intel
Device ID and Revision	<b>Device ID and Revision</b>	N/A
Power Supply Operation	3.3 and 5 V	3.3 and 5 V
Max Operating Current	<b>2.7 mA @ 3.3 V</b> 4 mA @ 5 V	3.2 mA @ 3.3 V 4 mA @ 5 V
Max Frequency on XTAL1	<b>22 MHz @ 3.3 V</b> <b>33 MHz @ 5 V</b>	14 MHz @ 3.3 V 16 MHz @ 5 V
Data Sampling Rates	16X	16X
BRG Prescaler	1 or 4	1 or 4
Max Data Rate	<b>1.375 Mbps @ 3.3 V</b> <b>2 Mbps @ 5 V</b>	875 Kbps @ 3.3 V 1 Mbps @ 5V
Package	44-PLCC, 48-TQFP, 40-PDIP, 52-QFP	44-PLCC, 64-SQFP
Operating Temperature Ranges	Commercial and Industrial	Commercial and Industrial
TX/RX FIFO Size	<b>128</b>	64
TX/RX Trigger Tables	<b>4 Trigger Tables</b>	2 Trigger Tables (depending on FIFO Size)
TX/RX FIFO Interrupt Trigger Levels	<b>Programmable (Table D)</b> <b>4 Selectable (Tables A-C)</b>	4 Selectable
TX/RX FIFO Counters	<b>TX/RX FIFO Counters</b>	N/A
Hardware Flow Control	Auto RTS/CTS Flow Control	Auto RTS/CTS Flow Control
Software Flow Control	<b>Auto Xon/Xoff Flow Control</b>	N/A
Auto Hysteresis Level	<b>16 Selectable Levels</b>	N/A
Infrared Mode	<b>IrDA encoder/decoder (ver 1.0)</b>	N/A
Sleep Mode	Sleep Mode with Auto Wake-up	Sleep Mode with Auto Wake-up
Low Power Mode	N/A	<b>Low Power Mode</b>
Diagnostic Modes	Local loopback	Local Loopback
RS485 Mode	<b>Auto RS485 Mode</b>	N/A
Direct Memory Access Mode	<b>Direct Memory Access Mode (52-QFP)</b>	N/A
16-Bit Bus Mode	<b>16-Bit Bus Mode (52-QFP)</b>	N/A

---

#### 1.4 REPLACING THE TL16C750 WITH THE ST16C650A OR XR16C850

You can directly replace TI's TL16C750 with Exar's ST16C650A or XR16C850 with minimal hardware changes if using the 44-PLCC package. The crystal oscillator circuitry should work in most cases, but it may be necessary to modify the oscillator circuitry to replace the TL16C750 with the ST16C650A or the XR16C850. If using the ST16C650A or XR16C850 in the other packages, hardware changes will be required since the TL16C750 is not available in those packages.

The software will need to be updated to take into account the enhanced features of the ST16C650A and XR16C850 that are not available in or different from the TL16C750. For example, some of the IER, ISR, FCR, and MSR register bits may function differently in the XR16C850 compared to the TL16C750. And there are additional registers in the ST16C650A and XR16C850 that are not in the TL16C750.

In a nutshell, if the following features are not used in the TL16C750,

- Hardware Flow Control
- Low Power Mode

the only modification the user needs to do to existing software is for the FIFO depth difference.

There should not be any timing problems replacing the TL16C750 with the ST16C650A or XR16C850 because they are more flexible than the TL16C750 as described in the bus timing section.
