

SP3203E FAQ

Sipex Part: SP3203E

Date: Mar21-07

Question:

We currently use your SP3203EEY part in one of our design. We now need a RS-485 interface instead of RS232. Do you have a pin-compatible part where we can jus replace the SP3203EEY with another one so we can convert quickly our product?

Answer:

RS-485 is a differential topology so it will not map directly pin for pin with RS-232 which is single ended. If you send a schematic of the SP3203 portion of your application we may be able to find a part that works but it may not be possible without changing your PCB layout.
