XR46050

Two-Step LED Current Controller

Description

The XR46050 is a two-step LED current controller for bulb application powered by an alternative current (AC) voltage source directly. It can drive an external N-channel power MOSFET to regulate the current flowing through a High Voltage (HV) LED string.

The XR46050 works as a constant current regulator to control two-step current levels for AC step driver with simplest structure. It also provides linear type Over Temperature Protection (OTP).

The PCB design can be very compact to meet various shape requirements. It is especially suitable for replacing A-series LED light bulbs and candelabra LED bulbs.

FEATURES

- Device
  - 6V to 76V chip supply voltage range
  - Over temperature protection
  - Single board LED lighting solution available
  - 2mm x 2mm TDFN-6 package
- System
  - All solid state components
  - No electrolytic capacitor required
  - Fewer component counts and simple solution for LED lighting
  - Scalable architecture allows optimization of performance vs. cost
  - Driver-on-board and chip-on-board design solution available which minimize process flow and assembly cost
  - High PF and Low THD performance
  - Flexible PCB layout options

APPLICATIONS

- A series LED bulbs
- Candelabra LED bulbs
- AC LED lighting engines

The product (or products) mentioned in this data sheet are no longer being manufactured and may not be ordered (OBS)

Typical Application

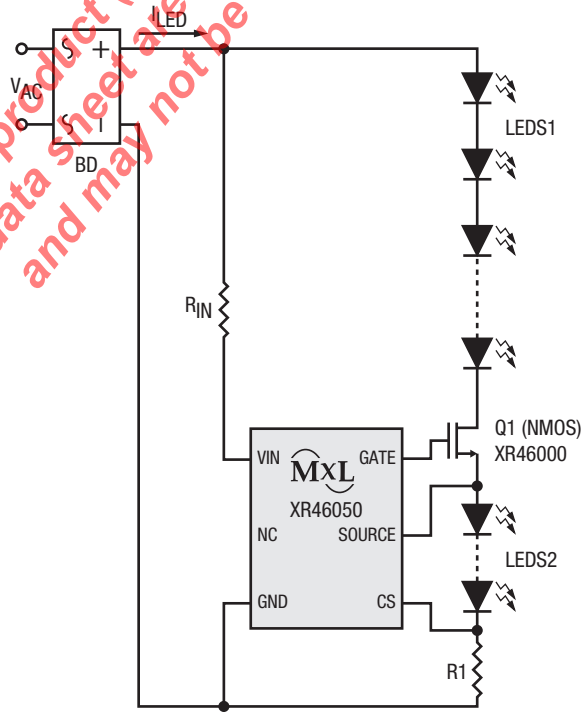

Figure 1. Typical Application

Absolute Maximum Ratings

Stresses beyond the limits listed below may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Sustaining Voltage

- VIN, GATE, SOURCE to GND ..... -0.3V to 85V
- GATE to SOURCE ..... -0.3V to 7V
- SOURCE to CS ..... -0.3V to 70V
- CS to GND ..... -0.3V to 1V

VIN input current 3mA

SOURCE to CS current 180mA

Maximum operating junction temperature, T_J ..... 150°C

Operating temperature, T_{OPR} ..... -40°C to 85°C

Storage temperature range ..... -55°C to 150°C

Lead temperature (soldering, 10 seconds) ..... 260°C

Operating Conditions

Input Voltage, V_{IN} ..... 6V ~ 76V

Peak level current ..... 180 mA

The product (or products) mentioned in this data sheet are no longer being manufactured and may not be ordered (OBS)

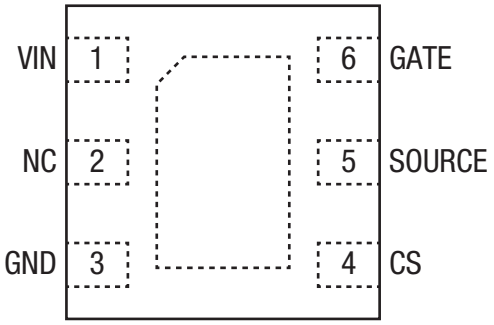

NOTES:
1. All voltages are with respect to ground. Currents are positive into, negative out of the specified terminal.
2. All parameters having min/max specifications are guaranteed. Typical values are for reference purpose only.
3. Unless otherwise noted, all tests are pulsed tests at the specified temperature, therefore: $T_J = T_C = T_A$.

Electrical Characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Units
VIN_{MIN}	Minimum VIN supply voltage		6			V
I_{IN}	VIN supply current	V_{IN} = 6V to 73V		0.3	0.5	mA
VIN_{CLAMP}	VIN over voltage clamp	When VIN > VIN_{CLAMP}, I_{IN} will increase to >1mA to clamp VIN at VIN_{CLAMP}	74	76	80	V
V_{CS}	CS voltage	VIN = 15V and 75V	310	323	336	mV
V_{REF1}/ V_{REF0}	Reference voltage ratio		85	90	95	%
V_{GATE}	GATE voltage	Gate to SOURCE		5.4		V
I_{SOURCE}	GATE source current(1)	V_{GATE} - V_{CS} = 3V		30		µA
I_{SINK}	GATE sink current(1)	V_{GATE} - V_{CS} = 3V		500		µA
T_{TP}	Thermal protection trip temperature	When T_J is higher than T_{TP}, V_{CS} decreases linearly	135	145		°C
$\Delta V_{CS}/\Delta T_J$	Thermal protection mode V_{CS} decreasing slope(1)	$T_J > T_{TP}$		-1.1		%/°C

NOTE:
1. Guarantee by design, not by production test.

Pin Configuration

2mm x 2mm TDFN-6

Pin Functions

Pin Number	Pin Name	Description
1	VIN	Power supply pin.
2	NC	No connection.
3	GND	Ground pin.
4	CS	Current sense pin. Connect a sense resistor, R_{CS}, between this pin and the GND pin. The peak current is set by $I_{OUT} = V_{CS}/R_{CS}$.
5	SOURCE	External HV NMOS SOURCE pin. The V_F of the LED segment connected between the source pin and the CS pin should not be higher than 70V.
6	GATE	External HV NMOS gate driving pin. Limited to 5.5V maximum.
Exposed thermal pad (EP)		Exposed thermal pad of the chip. Use this pad to enhance the power dissipation capability. The thermal conductivity will be improved if a copper foil on PCB is soldered with the thermal pad. It is recommended to connect the exposed thermal pad to the GND pin.

The product (or products) mentioned in this data sheet are no longer being manufactured and may not be ordered (OBS)

Functional Block Diagram

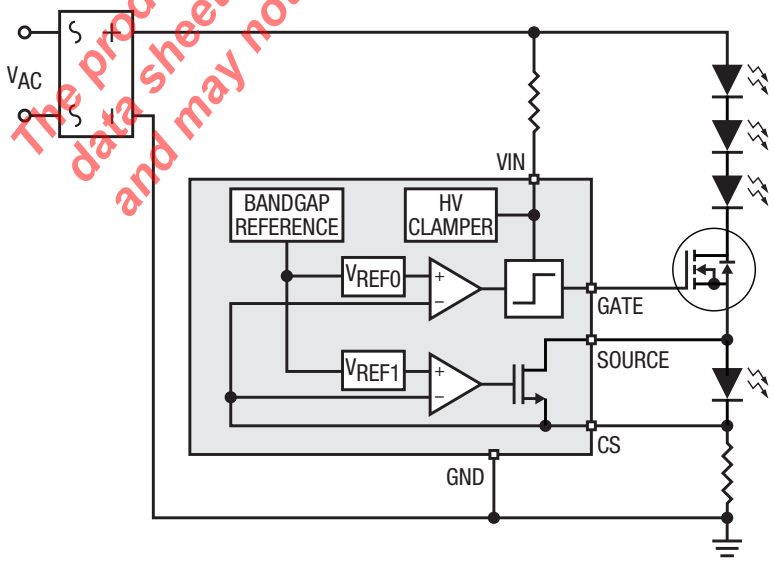

Figure 2. Functional Block Diagram

Applications Information

Typical Application

For a typical two-step driving scheme with one XR46050, the electrical performance is good enough to meet most of the requirement: the Power Factor (PF) is higher than 0.92 and the Total Harmonic Distortion (THD) is around 30%. If higher PF or lower THD is required, one more XR46083 or XR46084 can be added to make the lighting system becoming a three-step driving scheme, as shown in below. The three-step system can provide better electrical performance of PF > 0.96 and THD = ~ 20%.

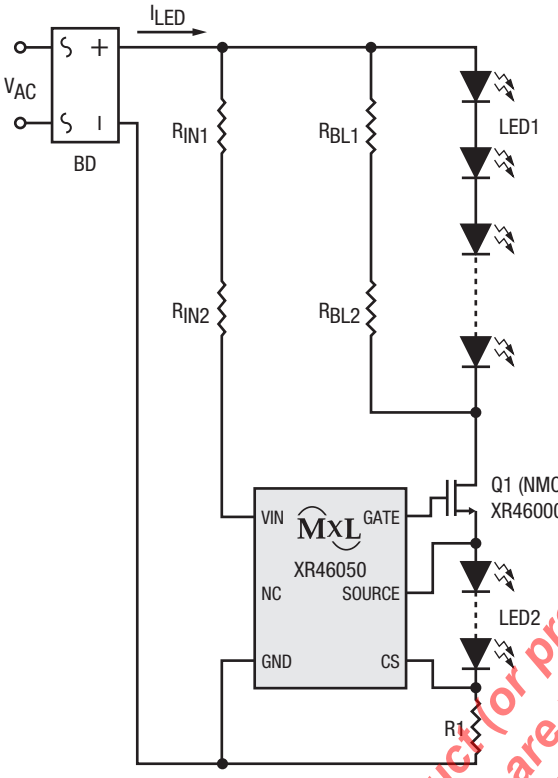

Figure 3. 2-Step (PF > 0.92, THD = ~ 30%)

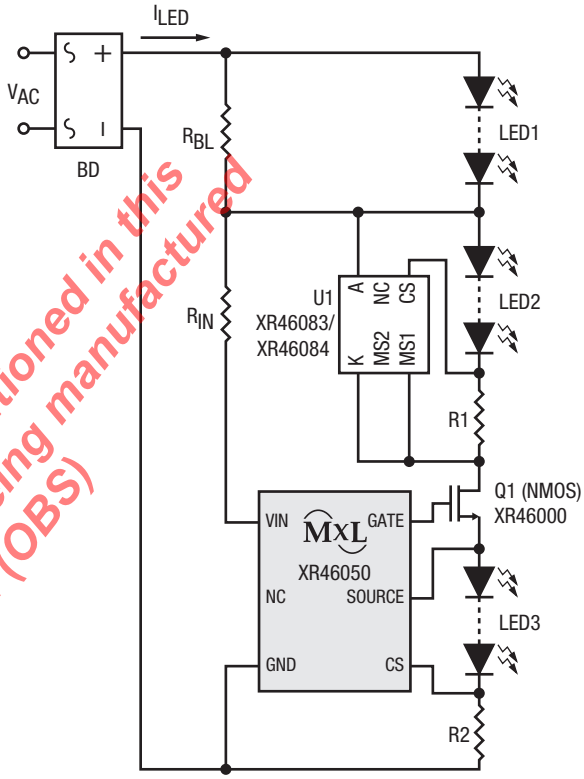

Figure 4. 3-Step (PF > 0.96, THD = ~ 20%)

The product (or products) mentioned in this data sheet are no longer being manufactured and may not be ordered (OBS)

Applications Information (Continued)

Linear Type Thermal Protection

When the junction temperature T_J rises up to the Thermal Protection Trip temperature T_{TP} (145°C in typical), the current sense voltage V_{CS} starts to decrease linearly at a slope of -1.1%/°C. The LED driving current decreases accordingly. The system can still work normally under the thermal protection mode with lower driving current. The power dissipation on the XR46050 chip becomes lower so the T_J will stop increasing when thermal balance is reached.

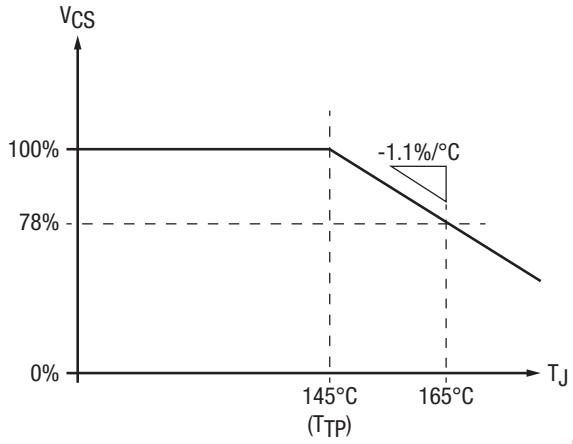

Figure 5. V_{CS} vs. T_J

Layout Suggestion

The exposed thermal pad under the chip is used to enhance the power dissipation capability. The thermal conductivity will be improved if a copper foil on PCB soldered with the thermal pad can be as large as possible. It is strongly recommended to connect the GND pin to the exposed thermal pad.

The external HV NMOS is recommended to be placed close to the chip. The pull-high resistor for the V_{IN} pin should be placed close to the chip too. The current sense resistor connected between the CS pin and GND pin should be placed as close as to the CS pin and GND pin, as the example in below.
